

Must read before use

1.Expansion package instructions

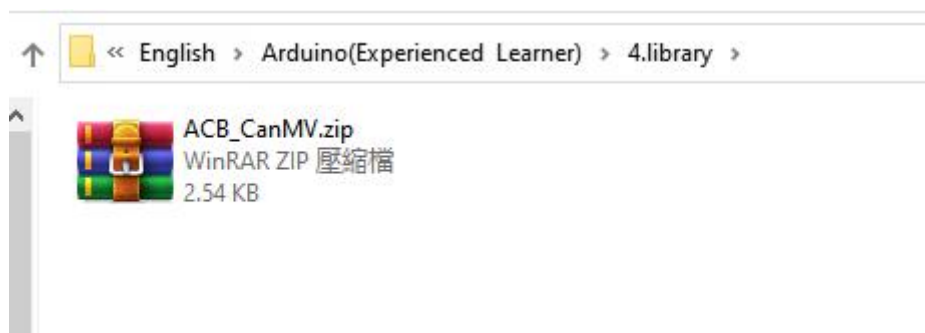

This product is an expansion kit for the QD001 smart car. If you have not used the QD001 before, please first use the QD001 tutorial for basic learning, and then continue with the study of this product.

2.The link to the assembly steps of the AI car

[【Please click to get the build step diagram】](#)

3.Add library files

This course contains library files related to the use of the K210 module. Therefore, please complete the addition of the library files before uploading the program. The library file location of the K210 module is at: QD003 Tutorial \ English\Arduino(Experienced Learner)\4.library

Note: For the specific method of adding library files, please refer to the library file addition tutorial in the QD001 tutorial.

4.Steps for updating the firmware

Since the firmware of the K210 module has been updated to V1.0.1, if your K210 module is of the old firmware version V1.0.0, it needs to be updated before use.

You can connect the K210 module to the computer with a USB cable. When the computer is turned on, the firmware version will be displayed on the screen.

Old firmware V1.0.0

New firmware V1.0.1

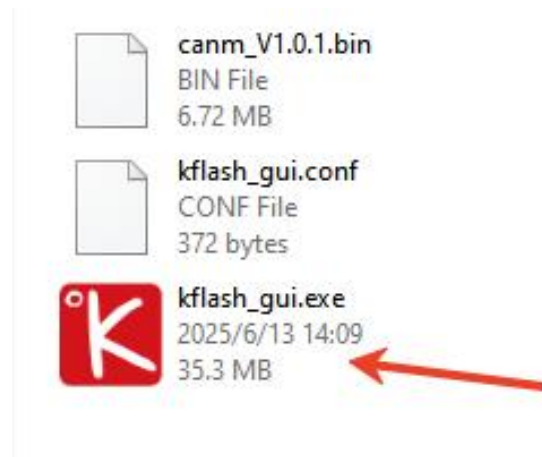

【 Firmware Burning 】

(1) Open the folder of the firmware burning tool

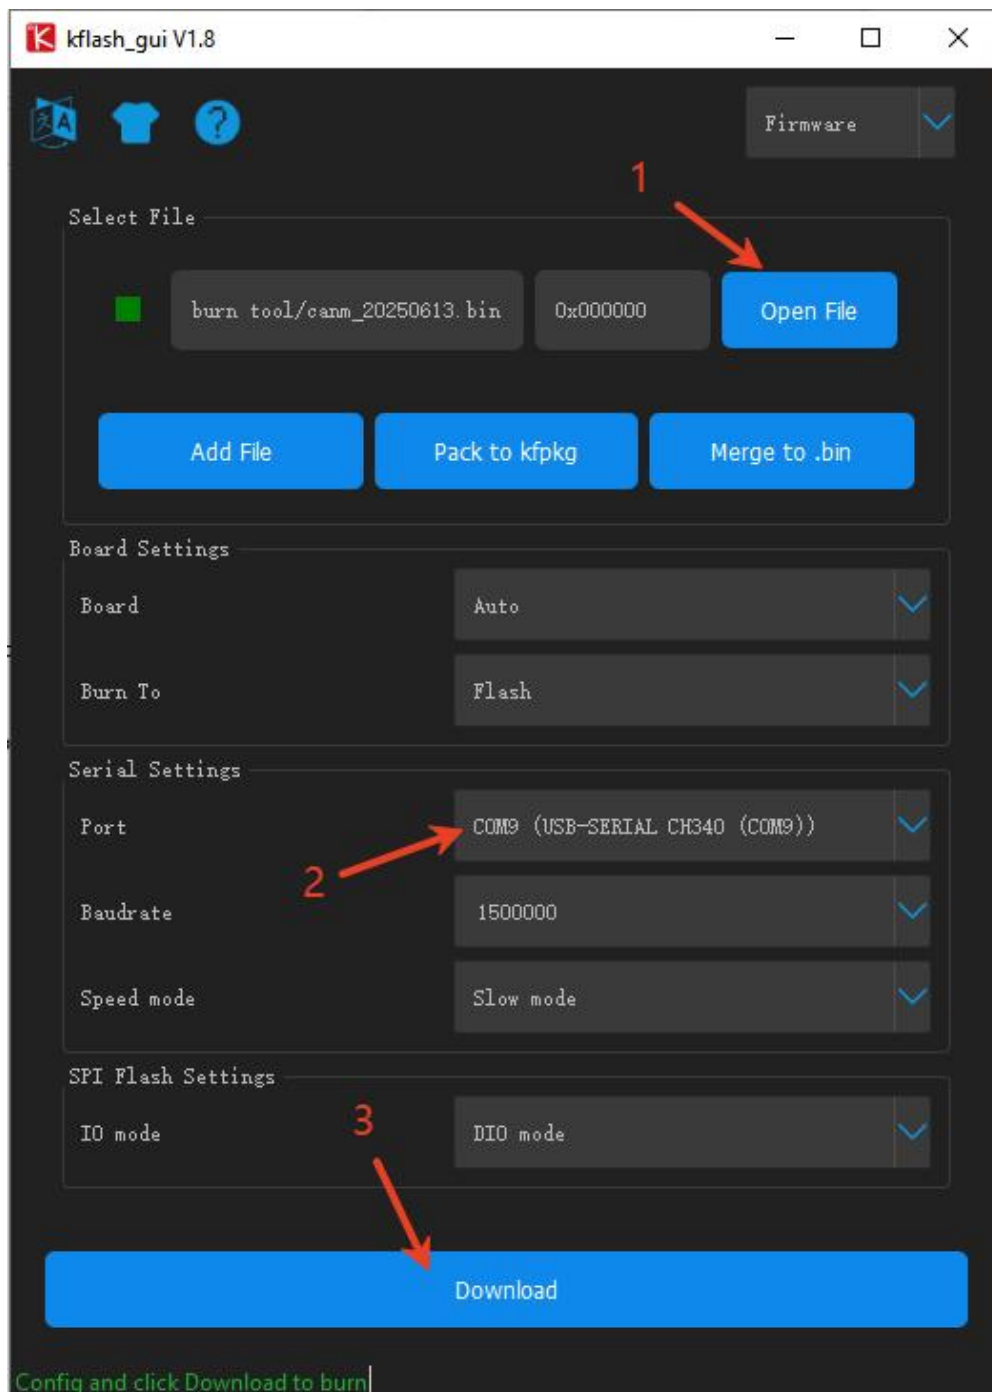

[【Please click to open the firmware burning tool】](#)

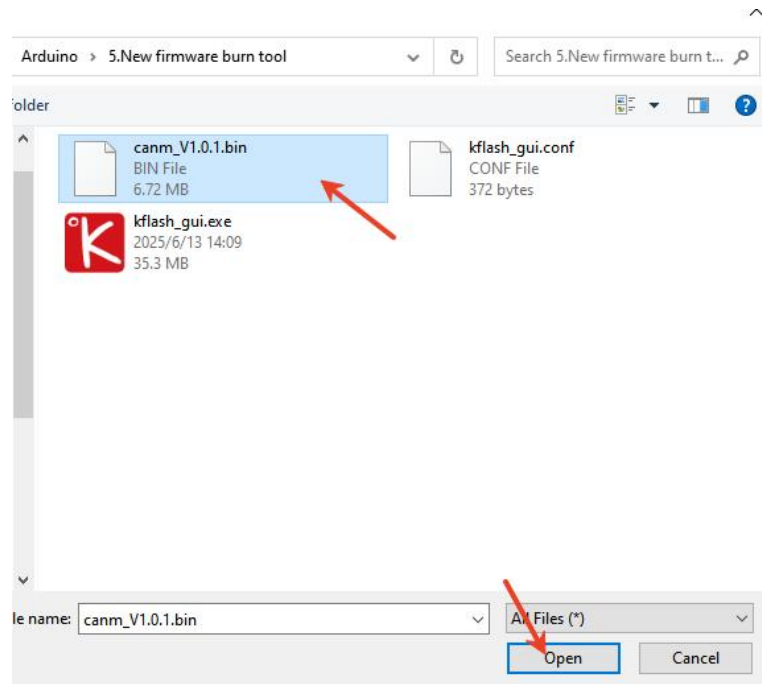

(2) Double-click the mouse to open the firmware burning tool

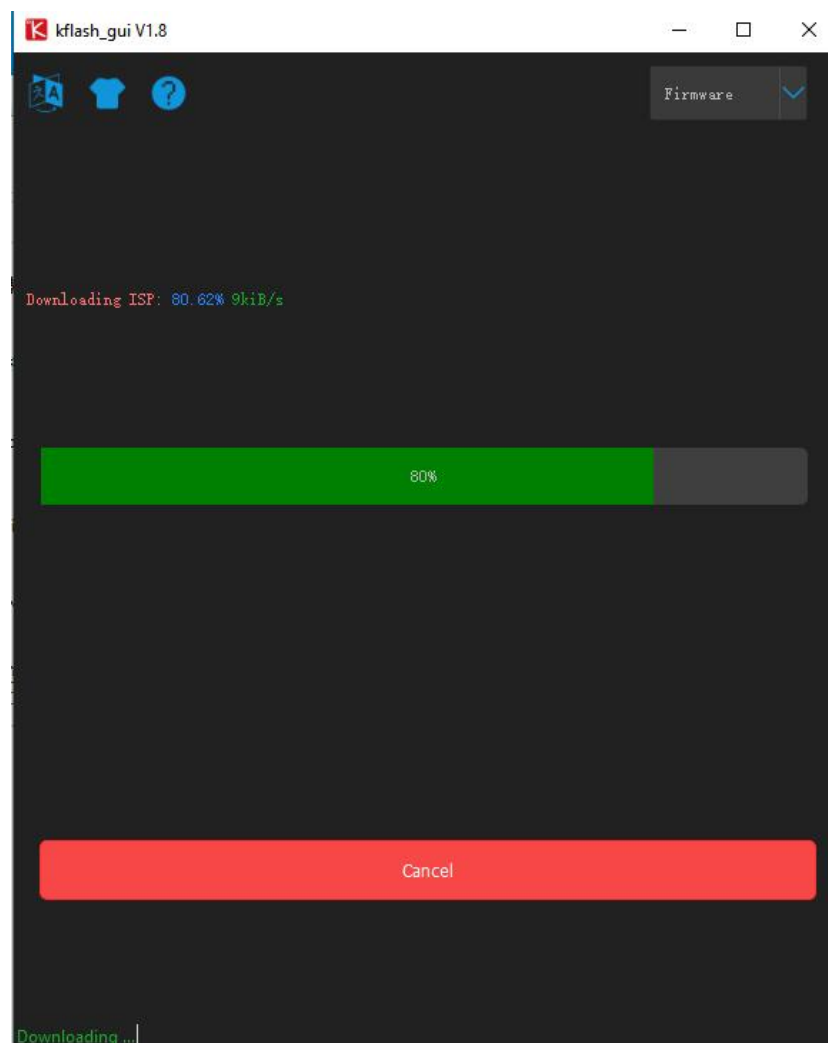

(3) Upload firmware

①Connect the K210 module to the computer with the Type-C USB cable, then select the firmware file, choose the corresponding serial port, and then click Download.

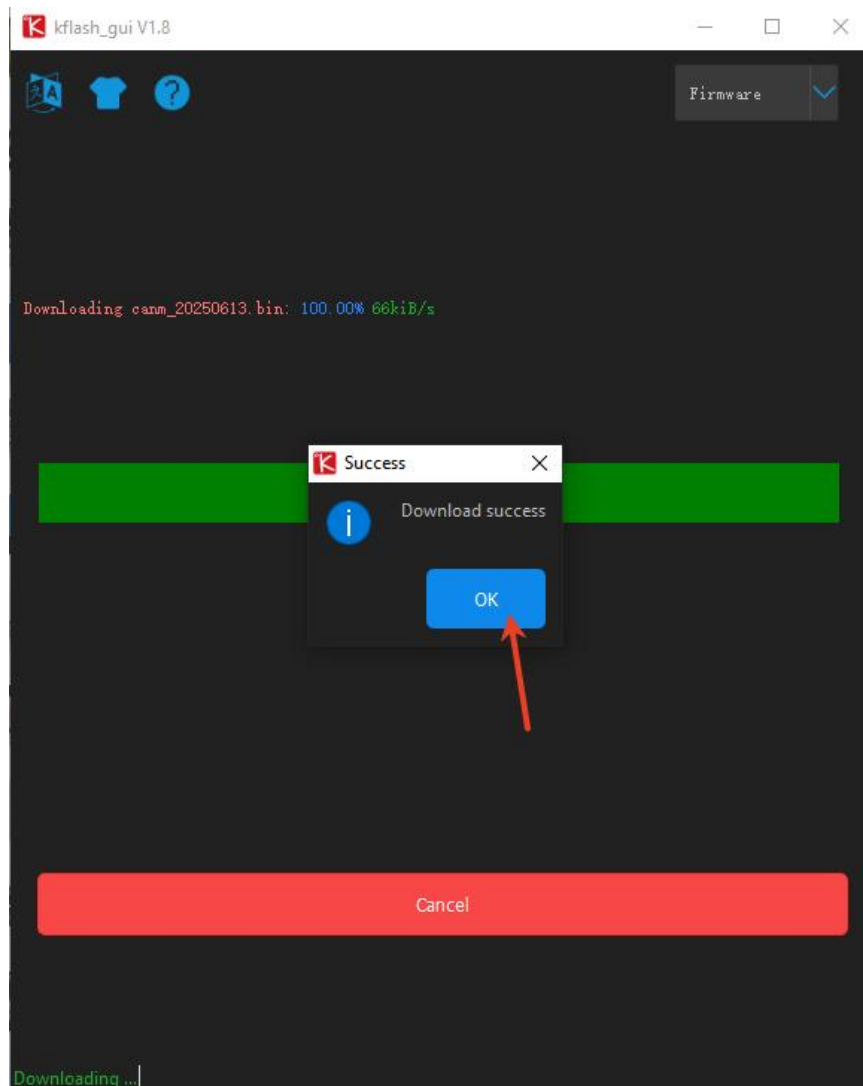

②Wait for the firmware to be burned

③ Burning successful
